Aritmos develops and implements enterprise software solutions, specializing in ERP systems and vertical applications for the agri-food industry.

The company provides consulting, implementation, integration and support services, helping organizations optimize operations, improve traceability, and enhance decision-making through advanced digital management tools.

The leading agricultural software for the agri-food sector

Products & Services

Aritmos Agro provides **specialized software solutions for the agri-food industry**, integrating advanced sector-specific functionalities with leading ERP platforms.

The solution covers the entire value chain, including **production management, traceability, quality control, logistics, and financial integration.**

Aritmos also delivers consulting, implementation, customization, and support services, helping agri-food companies digitalize operations, ensure regulatory compliance, and improve efficiency and decision-making.

Beniplast Benitex manufactures high-performance woven plastic fabrics for industrial, agricultural and packaging applications, with a strong focus on crop protection.

The company operates a fully integrated production process including extrusion, weaving and coating. With more than 60 years of experience, it combines technical expertise and continuous innovation to provide reliable solutions.

Supported by a strong global distribution network, Beniplast Benitex supplies customers in markets such as Morocco, Chile, France, Italy, and many other countries worldwide.

Products & Services

We offer a wide portfolio of technical fabrics designed for **agricultural protection** and professional applications.

Our main products include **anti-hail nets, shading nets, and insect-proof nets**, widely used to protect crops and improve growing conditions.

We also manufacture other specialized meshes and waterproof woven fabrics for demanding outdoor environments.

With extensive manufacturing experience, we provide flexible solutions tailored to our customers' requirements, adapting dimensions and specifications to meet the specific needs of each project.

De L'Ora Bio is a Spanish leading company specializing in value-added crop nutrition and biocontrol solutions for agribusiness.

Thanks to our R&D&I center and strong industrial capacity, we are able to develop tailored programs adapted to the specific needs of each market. We are highly specialized in avocado and export crops.

EFFICIENCY IN EVERY DROP

Products & Services

At De L'Ora Bio, we develop innovative solutions for the agricultural sector worldwide.

Our R&D center is located in Spain, and we operate production facilities in both Spain and Kenya.

We help our partners **improve profitability** by increasing competitiveness and adding value across the production chain. Our focus is on **sustainable, efficient, and differentiated agronomic solutions.**

ECONATUR is one of the leading companies in the Spanish market for special fertilizers, biostimulants, and crop protection products.

The company has developed its own technologies supported by more than 10 industrial patents and has extensive expertise in formulations based on plant extracts and microorganisms.

Our principles place environmental, human, and animal health at the core of our activity.

The company is highly internationalized, operating in more than 35 countries, with over 50% of its production being exported.

PROTECTING PEOPLE'S HEALTH THROUGH AGRICULTURE AND NUTRITION

Products & Services

Four product lines:

1. Biostimulants, based on our own production technologies:

- Econatur Polyphenol Technology (EPT):
- Econatur Primary Metabolism (EPM)

These technologies enables us to produce well-differentiated biostimulants designed either for the entire crop cycle or for specific critical vegetative stages as well as anti-stress formulations.

2. Plant protection products: a wide range of natural formulations zero-residue to fight against pests, pathogens and plant diseases, with more than 20 years of proven field performance.

3. Efficient plant nutrition: formulations that combine our high-density product technology with our Efficient Econatur System (ese) technology.

4. Metabiotics: biotechnology solutions based on beneficial microorganisms for biostimulation, plant nutrition and plant protection.

For more than 50 years, we have adapted to the customer's needs by building structures for different crops and optimizing their performance.

Our wide and versatile product range enables us to solve any situation that may arise, thanks to our continuous development and innovation.

We manage every stage of the project, from the design of the structure to its assembly.

All our products are manufactured according to strict quality standards, to maintain our core philosophy: customer satisfaction.

Tell us what you want to grow, the climatic conditions and we will help you choose the best solution and facilities to carry out your project.

Products & Services

Developing all types of solutions and facilities regarding **greenhouse structures**.

We manufacture tunnel type structures, greenhouses with straight walls, curved, gothic, and gable roof, all with different coating options, **giving solution to any type of crop, climate, and area.**

We also take care of the **execution of every stage of the project**, from the design of the structure to its assembly. Our greenhouses are installed in more than 20 countries worldwide.

NULAB provides smart sensing solutions to foster the transition from the “SAMPLE to LAB” to the “LAB to SAMPLE” concept through the development of monitoring solutions based on custom portable and easy-to-use sensors, currently focused on providing quality and safety measurements in the agrifood sector.

NULAB has developed a portable NIR smart sensor solution which allows the agrifood companies to monitor food safety and quality information on real time, non product destructive, on site, in an accuracy way and in a digital environment.

From “SAMPLE to LAB” to “LAB to SAMPLE”

Products & Services

The **NULAB Portable NIR Device** is a robust, easy-to-use, multipurpose, and autonomous tool for instant measurement of **food quality and safety**.

The NULAB Portable NIR Device is ideal for bringing the analytical control laboratory directly to the product's location (LAB to SAMPLE): dry matter in avocado. It features a display that shows the measurement results, includes a built-in battery, and offers Bluetooth connectivity. The device runs on powerful, intuitive software that requires minimal training and can be operated via smartphone, tablet, or PC.

RITEC is a leading provider of agricultural technology solutions specializing in advanced irrigation, fertigation, and automation systems for high-value crops.

The company develops reliable, efficient and scalable technologies that optimize water and nutrient management, improve crop performance, and support sustainable production in modern agriculture.

Precision technology for high-value crops

Products & Services

Products:

- Precision irrigation systems
- Automated fertigation units
- Climate and irrigation controllers
- Monitoring sensors and devices
- Integrated software platforms

Services:

- Engineering and system design
- Installation and commissioning
- Technical support and maintenance
- Customized irrigation and fertigation solutions
- Water and nutrient management optimization.
